

Submission Worksheet

Submission Data

Course: IT202-007-F2025

Assignment: IT202 PHP Multi-Dimension Problems

Student: Roshan T. (rt524)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 1000.00/1000.00 (100.00%)

Received Grade: 0.00/1000.00 (0.00%)

Started: 11/1/2025 12:30:21 PM

Updated: 11/1/2025 12:49:28 PM

Instructions

- Overview Link: <https://youtu.be/jd5giyXReal>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Create a new branch from dev called M6-Homework
 - 1. `git checkout dev` (ensure proper starting branch)
 - 2. `git pull origin dev` (ensure history is up to date)
 - 3. `git checkout -b M6-Homework` (create and switch to branch)
- 3. Copy the template code from here: [GitHub Repository - M6 Homework](#)
 - It includes Problems 1-3 and `base.php`. Put all into an M6 folder or similar inside your `public_html`
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M6 HW baseline files"`
 - `git push origin M6-Homework`
 - Create a Pull Request from M6-Homework to dev and keep it open
- 4. Fill out the below worksheet
 - Each Problem requires the following as you work
 - Ensure there's a comment with your UCID, date, and brief summary of how the problem was solved
 - Initial outline/plan of how you'll solve it via comments (add/commit after this stage)
 - Code solution (add/commit periodically as needed)
- 5. Once finished, click "Submit and Export"
- 6. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M6-Homework`
 - 4. On Github merge the pull request from M6-Homework to dev
 - 5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the heroku prod links work)

7. Upload the same PDF to Canvas

8. Sync Local

1. git checkout dev
2. git pull origin dev

Section #1: (250 pts.) Problem 1 - Subset

Progress: 100%

≡ Task #1 (250 pts.) - Edit the `processBirds` function to extract properties

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Challenge: Extract the name, color, region of each bird into the \$subset array
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy)

```
function processbirds($birds) {  
  printProblem1a($birds);  
  echo "<br>subset output:<br>";  
  
  // Note: use the $birds variable to iterate over, don't directly touch $a1-$a4  
  // 1000 Objective: Extract the name, color, region into a separate multi dimension array called $subset  
  $subset = []; // result array  
  // Start edits  
  // PT524 10/30/25 solution: iterate over the birds in a foreach loop and if the key is name,color,region then add to subset  
  $temp = [];  
  foreach ($birds as $bird) {  
    $temp["name"] = $bird["name"];  
    $temp["color"] = $bird["color"];  
    $temp["region"] = $bird["region"];  
    $subset[] = $temp;  
  }  
  
  // End edits  
  echo "xpres" . var_export($subset, true) . "</pre>";  
}
```

code for problem 1

heroku dev problem 1

 Saved: 11/1/2025 12:33:37 PM Part 2:

Progress: 100%

Details:

- Direct link to the file in the homework related branch from Github (should end in `.php`)
- Direct link to the file on Heroku Prod (Just grab the base prod url and manually enter the path to the file)

URL #1

https://github.com/rt-524/rt524-it202-007/M6-Homework/public_html/M6/problem1.php

URL

<https://github.com/rt-524/rt524-it>

URL #2

<https://rt524-it202-007-prod-a195f178bfec.herokuapp.com/M6/problem1.php>

URL

<https://rt524-it202-007-prod-a195f178bfec.herokuapp.com/M6/problem1.php> Saved: 11/1/2025 12:33:37 PM Part 3:

Progress: 100%

Details:

Briefly explain `how` the code solves the challenge (note: this isn't the same as `what` the code does)

Your Response:

The code solves creates a subset of the main array by extracting the properties from a dictionary into another temporary dictionary, then adding it to the subset array

 Saved: 11/1/2025 12:33:37 PM

Section #2: (250 pts.) Problem 2 - Adding Properties

Progress: 100%

 Task #1 (250 pts.) - Edit the `processCars`` function to add properties

Details:

- Only make edits where noted via provided comments
- Challenge 1: Add a new property called age that's set from today's year and the car's year
- Challenge 2: Add a new property called isClassic that's true/false based on \$classic_age
- Step 1: sketch out plan using comments (include ucid and date)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

 Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy)

```
// Start edits
// rt524 10/30/25
// use the date() function to get the current date in year format
// create the temporary array to hold each car and its current values, but add age (date - year) and set classic as true if (
$date = date('Y');
foreach ($cars as $car) {
    $temp = [];
    $temp = $car; // You, 2 days ago's Uncommitted changes
    $temp["age"] = $date - $car["year"];
    if ($date - $car["year"] >= $classic_age) {
        $temp["isClassic"] = true;
    } else {
        $temp["isClassic"] = false;
    }
    $processedCars[] = $temp;
}
// End edits
```

Saved: 11/1/2025 12:40:34 PM

Part 3:

Progress: 100%

Details:

Briefly explain `how` the code solves the challenges (note: this isn't the same as `what` the code does)

Your Response:

The code adds information to the cars by creating a new key age and isClassic added to a temporary dictionary, then added to processedCars.

Section #3: (250 pts.) Problem 3 - Join

Progress: 100%

≡ Task #1 (250 pts.) - Edit the `joinArrays` function to combine two arrays based on a common key

Progress: 100%

Details:

- Only make edits where noted via provided comments
- Challenge: Combine the data in both arrays by the `userId` property
- Step 1: sketch out plan using comments (include `ucid` and `date`)
- Step 2: Add/commit your outline of comments (required for full credit)
- Step 3: Add code to solve the problem (add/commit as needed)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment)
2. Full output of executing the program (visit the proper file on Heroku dev after a manual deploy)

```
function joinArrays($users, $activities) {  
    printProblemMultiData($users, $activities);  
    echo "<br>joined output:<br>";  
  
    // Note: use the $users and $activities variables to iterate over, don't directly touch $a1-$a4 arrays  
    // TODO Objective: Add logic to join both arrays on the userId property into one $joined array  
    $joined = []; // result array  
    // Start edits  
    // rt524 11/1/25 join the two arrays using array_merge() in a for loop, array 2 overwrites on common column  
    for ($i = 0; $i < count($users); $i++) {  
        $joined[] = array_merge($users[$i], $activities[$i]);  
    }  
    // End edits  
    echo "<pre>" . var_export($joined, true) . "</pre>";  
}  
  
$ucid = "rt524"; // replace with your UCID  
printHeader($ucid, 3);
```

Part 3:

Progress: 100%

Details:

Briefly explain **how** the code solves the challenges (note: this isn't the same as **what** the code does)

Your Response:

The code uses array_merge to merge on a common column for each array, appends to the joined array

Task #2 (83.33 pts.) - WakaTime - Activity

Progress: 100%

Details:

- Visit the WakaTime.com Dashboard
- Click **Projects** and find your repository
- Capture the overall time at the top that includes the repository name
- Capture the individual time at the bottom that includes the file time
- Note: The duration isn't relevant for the grade and the visual graphs aren't necessary

☰ Task #3 (83.33 pts.) - Reflection

Progress: 100%

☞ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned more about how for loops and arrays worked in PHP. For example, using `arrayname[]` in PHP allows me to append to the end of the array. I also learned when to use different types of for loops, such as when needing an index vs key value pairs.

Saved: 11/1/2025 12:47:59 PM

☞ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was appending to the existing array. Another easy part was grabbing information from the dictionaries and copying them into another dictionary to append to the array.

Saved: 11/1/2025 12:48:38 PM

☞ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of the assignment was figuring out the structure of the answer. For example, having a dictionary with an array or adding a dictionary into an array or nested dictionaries and figuring out how to add these things into the final array.
