

Submission Worksheet

Submission Data

Course: IT202-007-F2025

Assignment: Milestone 2 API Testing

Student: Roshan T. (rt524)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 10.00/10.00 (100.00%)

Received Grade: 0.00/10.00 (0.00%)

Started: 11/17/2025 9:17:42 PM

Updated: 11/17/2025 10:58:24 PM

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT202-007-F2025/milestone-2-api-testing/grading/rt524>

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-007-F2025/milestone-2-api-testing/view/rt524>

Instructions

- Overview Link: <https://youtu.be/86v8Ak0E3XE>
- 1. Ensure you read all instructions and objectives before starting.
- 2. Ensure you added your API choice to the Google doc shared on Canvas (selections must be unique, no two students can use the same exact API)
- 3. Create a new branch from Milestone2 called M7-Homework
 - 1. `git checkout Milestone2` (ensure proper starting branch)
 - 2. If you don't have Milestone2 yet, create it from Milestone1
 - 3. `git pull origin Milestone2` (ensure history is up to date)
 - 4. `git checkout -b M7-Homework` (create and switch to branch)
- 4. Follow the lesson from
 - Add `testApi.php` to your project folder
 - Immediately record to history
 - `git add public_html`
 - `git commit -m "adding M7 HW baseline files"`
 - `git push origin M7-Homework`
 - Create a Pull Request from M7-Homework to Milestone2 and keep it open
- 5. Fill out the below worksheet
 - Ensure you add the UCID/Date and details comments as you work
 - Get the example working with your chosen API
- 6. Once finished, click "Submit and Export"
- 7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin M7-Homework`
 - 4. On Github merge the pull request from M7-Homework to Milestone2
 - 5. On Github create and merge the pull request from Milestone2 to dev
 - 6. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the Heroku prod links work)

8. Upload the same PDF to Canvas

9. Sync Local

1. git checkout dev
2. git pull origin dev
3. git checkout Milestone2
4. git pull origin Milestone2

Section #1: (2 pts.) Analyze Api Choice

Progress: 100%

Task #1 (0.40 pts.) - API Link

Progress: 100%

URL #1

<https://rapidapi.com/letsrapi-6bRBapi0jse25ch/>

URL

<https://rapidapi.com/letsrapi-6bRBapi0jse25ch/>

Saved: 11/17/2025 9:19:14 PM

Task #2 (0.80 pts.) - Quota and Limitations

Progress: 100%

Your Response:

200 requests / month hard limit 1000 requests per hour 10240MB / Month +0.001\$ per 1MB

Saved: 11/17/2025 9:18:16 PM

Task #3 (0.80 pts.) - Goal Data

Progress: 100%

Details:

- Clearly note what type of data you'll be using
- Clearly note the specific properties you intend to use (it's likely not all of them)

Your Response:

In order to create the page, I would grab the query that was sent in parameters{}. As for the different properties, they can all be found in data[]. I would add the job_id as the primary key of the table. other fields I would include: job_title, employer_name, job_publisher, job_employment_type, job_apply_link, job_location, job_description, job_is_remote, job_posted_at_datetime_utc, qualifications as an array, responsibilities as an array Planning to use different tables with the job_id as a foreign key and the array values in their own separate table and use a join

Section #2: (6 pts.) Verify Api Choice

Progress: 100%

≡ Task #1 (6 pts.) - Edit the `testApi.php` file (and related `.env` content) to test your chosen API

Progress: 100%

Details:

- The code will need to be adjusted since your API differs from the one I chose
- You'll need to apply the API `.env` items to Heroku's config vars both `dev` and `prod`
- Be mindful of your API quota (may need to initially use a cached response until you get it working)

Part 1:

Progress: 100%

Details:

Two screenshots are expected

1. Snippet of relevant code showing solution (with ucid/date comment) 2. Don't show any private details like the API key
2. Full output of executing the `testApi.php` (visit the proper file on Heroku dev after a manual deploy)

⇒ Part 3:

Progress: 100%

Details:

Briefly explain what you needed to do in order to get this test working

Your Response:

I needed to change the data in the fields to match the required fields and other necessary fields on RapidAPI, set the endpoints and the host as found on the API page, add my key to .env and fetch it using JSEARCH_API_KEY in the other file, cache my results and change the form fields to be relevant to my API. I also had to reformat my cached output so that it would be properly displayed.

≡ Task #3 (0.67 pts.) - Reflection

Progress: 100%

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned about interacting with APIs in this lesson. Although I knew a bit about how they worked, this was my main introduction with actually figuring out how to formally use them with API keys and learning how to mess around with them in order to do things like cache an output or edit the structure of what I want to receive.

Saved: 11/17/2025 10:54:46 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was doing the initial setup of adding my specific API information to the file like the required fields. Learning how to navigate RapidAPI and the fields and parameters was also easy for me.

Saved: 11/17/2025 10:55:59 PM

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The most difficult part of this assignment was getting the output to properly appear when cached. It took me a long time to figure out how to match all of the braces and brackets as the information was all over the place as each output of mine could be hundreds of lines long.
