

Submission Worksheet

Submission Data

Course: IT202-007-F2025

Assignment: IT202 Milestone 2

Student: Roshan T. (rt524)

Status: Submitted | **Worksheet Progress:** 100%

Potential Grade: 802.00/802.00 (100.00%)

Received Grade: 0.00/802.00 (0.00%)

Started: 11/24/2025 9:47:52 PM

Updated: 11/24/2025 10:48:57 PM

Grading Link: <https://learn.ethereallab.app/assignment/v3/IT202-007-F2025/it202-milestone-2/grading/rt524>

View Link: <https://learn.ethereallab.app/assignment/v3/IT202-007-F2025/it202-milestone-2/view/rt524>

Instructions

- Overview Link: https://youtu.be/t6X8dzZt_a0
- 1. Refer to Milestone2 of this doc:
<https://docs.google.com/document/d/1XE96a8DQ52Vp49XACBDTNCq0xYDt3kF29cO88EWVwfo/view>
- 2. Ensure you read all instructions and objectives before starting.
- 3. Ensure you've gone through each lesson related to this Milestone
- 4. Switch to the Milestone2 branch
 - 1. `git checkout Milestone2` (ensure proper starting branch)
 - 2. `git pull origin Milestone2` (ensure history is up to date)
- 5. Fill out the below worksheet
 - Ensure there's a comment with your UCID, date, and brief summary of the snippet in each screenshot
 - Ensure proper styling is applied to each page
 - Ensure there are no visible technical errors; only user-friendly messages are allowed
- 6. Once finished, click "Submit and Export"
- 7. Locally add the generated PDF to a folder of your choosing inside your repository folder and move it to Github
 - 1. `git add .`
 - 2. `git commit -m "adding PDF"`
 - 3. `git push origin Milestone2`
 - 4. On Github merge the pull request from Milestone2 to dev
 - 5. On Github create a pull request from dev to prod and immediately merge. (This will trigger the prod deploy to make the heroku prod links work)
- 8. Upload the same PDF to Canvas
- 9. Sync Local
- 10. `git checkout dev`
- 11. `git pull origin dev`

Section #1: (2 pts.) Data

Progress: 100%

≡ Task #1 (0 50 pts) - API Data Table

Part 1:

Details:

- Show the table(s) structure of the table made to hold your API
- There should be at least 3 properties/fields beyond `id`, `created`, `modified`, and respective `is_api` or `api_id` columns
- Logical types and constraints should be set
- Show at least a few records from each API table (samples should include both API fetched data and custom entries noted by an `api_id` or `is_api` column)

```

1 CREATE TABLE IF NOT EXISTS `IT202_F25_Jsearch` (
2   `id` INT NOT NULL AUTO_INCREMENT PRIMARY KEY,
3   `job_id` VARCHAR(128) NOT NULL UNIQUE,
4   `country` VARCHAR(100),
5   `job_title` VARCHAR(255),
6   `employer_name` VARCHAR(255),
7   `job_publisher` VARCHAR(255),
8   `job_employment_type` VARCHAR(100),
9   `job_apply_link` TEXT,
10  `job_location` VARCHAR(255),
11  `job_city` VARCHAR(128),
12  `job_state` VARCHAR(128),
13  `job_description` TEXT,
14  `job_is_created` tinyint(1) DEFAULT 1,
15  `job_posted_at_datetime_utc` DATETIME,
16  `is_api` tinyint(1) DEFAULT 1,
17  `created` timestamp NOT NULL DEFAULT CURRENT_TIMESTAMP,
18  `modified` timestamp NOT NULL DEFAULT CURRENT_TIMESTAMP ON UPDATE CURRENT_TIMESTAMP
19 )

```

jsearch table

```

1 CREATE TABLE IF NOT EXISTS `IT202_F25_Jsearch_Qualifications` (
2   `id` INT AUTO_INCREMENT PRIMARY KEY,
3   `job_id` VARCHAR(128) NOT NULL,
4   `qualification_text` TEXT NOT NULL,
5   FOREIGN KEY (`job_id`) REFERENCES `IT202_F25_Jsearch` (`job_id`)
6   ON DELETE CASCADE
7 )

```

quals table

```

1 CREATE TABLE IF NOT EXISTS `IT202_F25_Jsearch_Responsibilities` (
2   `id` INT AUTO_INCREMENT PRIMARY KEY,
3   `job_id` VARCHAR(128) NOT NULL,
4   `responsibility_text` TEXT NOT NULL,
5   FOREIGN KEY (`job_id`) REFERENCES `IT202_F25_Jsearch` (`job_id`)
6   ON DELETE CASCADE
7 );

```

responsibilities table

Part 2:

Progress: 100%

Details:

- Add a direct link to your sql file from Github (should end in `.sql`)

Saved: 11/24/2025 9:51:34 PM

Part 3:

Progress: 100%

Details:

- Briefly note what each field/property represents

Your Response:

ID is the primary key, auto increments and is just the ID of the item

job_id is a unique identifier for a job country is the country the job is located in

job_title is the name of the role employer_name is the company job_publisher is where the job was found on employment_type full time, part time, etc apply_link stored as text to apply externally job_location for location of job, same as city and state for specifics

job description for specifics of the job, is_remote as a 0 or 1 to see if remote posted_at_datetime-utc stored as date time for when it's posted is_api if it's from the api or not

Saved: 11/24/2025 9:51:34 PM

Task #2 (0.50 pts.) - Data Transformation

Progress: 100%

Part 1:

Saved: 11/24/2025 10:15:37 PM

⇒ Part 3:

Progress: 100%

Details:

- Will you be using all the data or just a subset?
- Do you need to convert any data or extract pieces of a property's value?
- Briefly explain the transformation/extraction logic to get the API data to the shape your application intends to use

Your Response:

I am only using a subset of data. I did not need to convert anything, only needed to extract a specific subset of the data from the API. The extraction maps all data with the name to its respective column in the database. For example, "job_id" as ["job_id"] other otherwise marked as null and so on for all fields I wanted to have

Saved: 11/24/2025 10:15:37 PM

⇒ Task #3 (0.50 pts.) - API Duplicates

Progress: 100%

Details:

- Consider how duplicate entries are handled
 - What happens if you get the same result from the API for an entity that exists but has been unmodified?
 - What happens if you get the same result from the API for an entity that exists but has been modified?

Your Response:

duplicates will not be allowed as the job_id column is unique. Even if the field is modified, there should be no insertion as the column must be unique.

Saved: 11/24/2025 10:05:53 PM

⇒ Task #4 (0.50 pts.) - API Fetching

Progress: 100%

Details:

- Consider how your application will trigger this data fetch
 - (i.e., periodic via cron job, poor man's cron job, on app start/awake, etc)
 - (i.e., User or Admin triggered via a specific page/action)
 - (i.e., Lazy loaded during searches for stale/missing content)
 - What happens if you get the same result from the API for an entity that exists but has been modified?

Your Response:

The data is fetched through the create_job page only on the admin page. If more needs to be added, the parameters can be changed to fetch more data at once.

js validations

Saved: 11/24/2025 10:09:35 PM

Part 2:

Progress: 100%

Details:

- Briefly explain the html validations used
- Briefly explain the javascript validation logic
- Briefly explain the php validation logic

Your Response:

The php validations check if the fields that are required are empty or not and all return flash messages based on the error. Also checks length for fields requiring a certain length, greater or less. The js validation also checks if the required fields are empty and also if the URL is empty with the URL() function. The html validation check if the required fields have an input as well as checking the length of things aren't too long for the db.

Saved: 11/24/2025 10:09:35 PM

Task #2 (60 pts.) - Examples

Progress: 100%

Details:

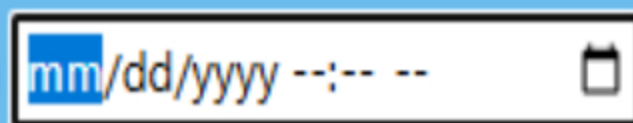

- Show a successful creation
- Demonstrate various validation errors
- Ensure heroku url is visible

A screenshot of a web browser showing a form titled "Create a New Job". The form has a light blue background and contains several input fields with labels: "Job ID (unique)", "Job Title", "Country", "Employer Name", "Posted At (UTC)", "Job Type", "Job Status", "Job Location", "Job Description", "Job Salary", "Job Category", "Job Subcategory", "Job Industry", "Job Function", "Job Level", "Job Experience", "Job Education", "Job Skills", "Job Keywords", "Job Tags", "Job Status", "Job Location", "Job Description", "Job Salary", "Job Category", "Job Subcategory", "Job Industry", "Job Function", "Job Level", "Job Experience", "Job Education", "Job Skills", "Job Keywords", "Job Tags". There is a "Create Job" button at the bottom right.

⇒ Part 2:

Progress: 100%

Details:

- Briefly explain how the filter/sort logic works and formulates the results
- Briefly explain how the list/grid output is generated
- Briefly note the styling choices

Your Response:

The code fetches the desired fields with certain constraints like the limit. The grid/list is generated using the job_card feature. Styling was the card as well as adding buttons for deleting and detailed view.

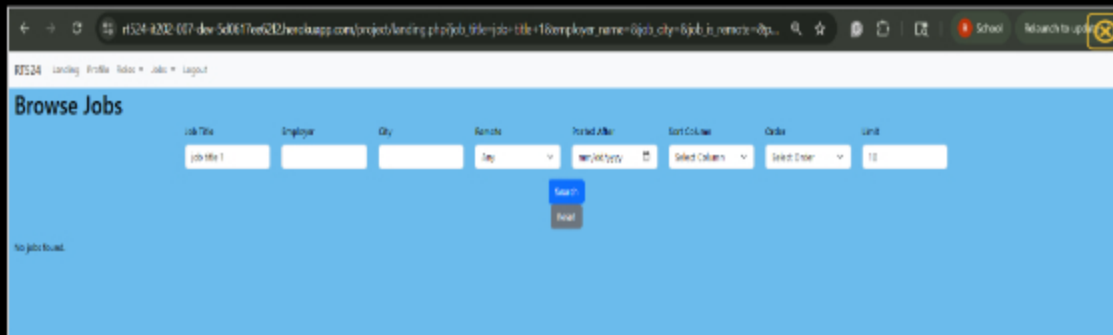

Saved: 11/24/2025 10:18:25 PM

📁 Task #2 (60 pts.) - Examples

Progress: 100%

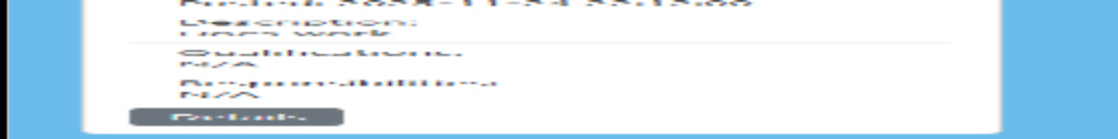

Details:

- Show a few variations of filter/sort applied (including no records)
- Each list item should be a summary
- Each list item should have the following links
 - A link to a single view of the specific entity (i.e., a details page)
 - A link to delete this entity (this may be an admin-only functionality, but it should be present for the respective role)
 - A link to edit this entity (this may be an admin-only functionality, but it should be present for the respective role)
- Ensure heroku url is visible

none found

example of a card

single view of entity and delete button

edit links on admin page

Task #3 (30 pts.) - Links

Progress: 100%

Details:

- Include the heroku prod link to this page
- Include pull request link for this feature

URL #1

<https://rt524-it202-007-prod-a195f178bfec.herokuapp.com/project/landing.php>

Section #4: (150 pts.) View Details Page (single view)

≡ Task #1 (60 pts.) - Code

Progress: 100%

Part 1:

Progress: 100%

Details:

- Show the code that handles loading of the record (and how the id retrieved for usage)
 - Include the code that handles invalid/missing ids
- Show the code that generates the entity output
- Styling must be applied

[illegible]**details code 1****details code 2**

details code 3

⇒ Part 2:

Progress: 100%

Details:

- Briefly explain how the loading logic works
- Briefly explain how the entity output is generated
- Briefly note the styling choices

Your Response:

The loading logic matches the same job_id that was clicked on on the card. It then uses a SQL select with joins for all the data to fully output the details of the specific job_id. Used a similar style to the cards with centering and bolding for the fields.

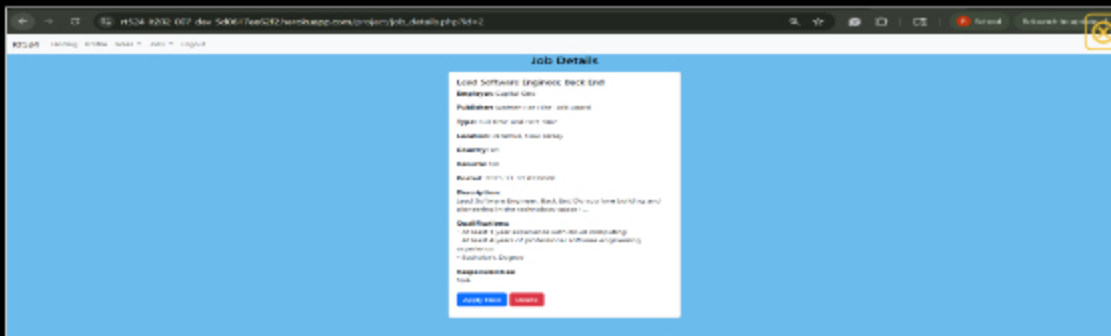

Saved: 11/24/2025 10:23:24 PM

📁 Task #2 (60 pts.) - Examples

Progress: 100%

Details:

- Show a few examples of different entities
- Each entity item should have more details than the summary view (if possible)
- Each entity should have the following links
 - A link to edit the single entity (this may be an admin-only thing, but it should be present for the respective role)
 - A link to delete the single entity (this may be an admin-only thing, but it should be present for the respective role)

single entity view, links to delete and edit for admins only

html form validation

[illegible]

html form validation

js validation

Saved: 11/24/2025 10:29:27 PM

≡ Part 2:

Progress: 100%

Details:

- Briefly explain how the loading logic works
- Briefly explain how the form is generated and submission is handled
- Briefly note the styling choices
- Note what fields are editable and why the choice was made for them (it's likely not all fields are editable, especially `id`, `created`, `modified`, etc)

Your Response:

Selects all data from all tables and ensures a match on the job_id. All fields are populated based on the match and when a change is made, sent through validation and updated/edited accordingly. Added the choice of adding and removing qualifications and responsibilities as an array. The fields are all editable except for the job_id as this should stay unique and not be touched, similar to ID.

Saved: 11/24/2025 10:29:27 PM

Task #2 (60 pts.) - Examples

Progress: 100%

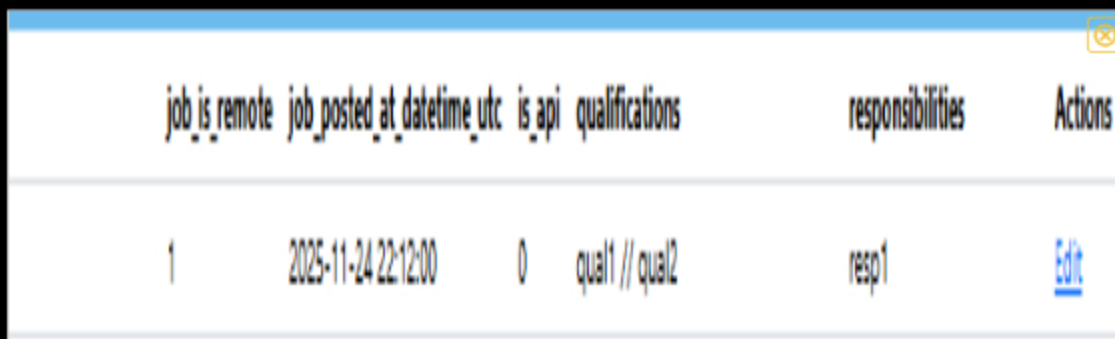

Details:

- Show a before and after of updating an entity (clearly caption)
- Successful update should have an appropriate message shown
- The updated data should be shown in the form
- Any errors should have user-friendly messages shown
- Show some examples of validation errors (html, javascript, php)

Section #6: (150 pts.) Delete Logic

Progress: 100%

Task #1 (60 pts.) - Code

Progress: 100%

Part 1:

Progress: 100%

Details:

- Show the code that handles deletion of the record (and how the id retrieved for usage)
 - Include the code that handles invalid/missing ids
- Handle any necessary roles/permissions (i.e., it's not likely that anyone can delete any entity they choose)
- Show the redirect logic that goes back to the previous page (where the route came from), if it was a list page, it should maintain the filter/sort criteria

```
// rt524 11/24 check if admin and add delete button
if (isset($_POST["delete"]) && has_role("Admin")) {
    try {
        $stmt = $db->prepare("DELETE FROM IT202_F25_Jsearch WHERE id = :id");
        $stmt->execute(["id" => $id]);
        flash("Job deleted successfully", "success");
        die(header("Location: " . get_url("landing.php")));
    } catch (PDOException $e) {
        error_log("Delete error: " . $e->getMessage());
        flash("Error deleting job", "danger");
    }
}
```

deletion and redirect logic

```
$id = se($_GET, "id", "", false);
if (empty($id)) {
```

```

        flash("Job ID not provided", "warning");
        die(header("Location: " . get_url("admin/list_jobs.php")));
    }
    if ($id <= 0) {
        flash("Invalid id passed", "danger");
        die(header("Location: " . get_url("admin/list_jobs.php")));
    }
}

```

id validation

```

<?php if (has_role("Admin")) : >>
    <form method="POST" style="display:inline-block;">
        <button type="submit" name="delete" class="btn btn-danger mt-2"
            onclick="return confirm('Are you sure you want to delete this job?');">
            Delete
        </button>
    </form>
<?php endif; ?>
</div>
</div>
</div>

```

deletion permissions

 Saved: 11/24/2025 10:41:03 PM

Part 2:

Progress: 100%

Details:

- Briefly explain how the deletion logic works
- Is it a soft or hard delete?
- Note any permissions/rules applied.
- Briefly explain how the redirect maintains the previous route and any filter/sort data

Your Response:

The deletion logic makes a sql call that deletes the ID from the database, it is a hard delete. This only happens if the user is logged in and has the role "admin." The redirect then goes back to the previous page (landing) where all the other listings are and keeps filters applied.

 Saved: 11/24/2025 10:41:03 PM

Task #2 (60 pts.) - Examples

Progress: 100%

Details:

- Show a successful delete message
- Show a before and after database view of the record being deleted (clearly caption)

- Successful update should have an appropriate message shown
- The updated data should be shown in the form
- Any errors should have user-friendly messages shown

≡ Task #3 (16.67 pts.) - Reflection

Progress: 100%

⇒ Task #1 (0.33 pts.) - What did you learn?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

I learned how to work with APIs and in general the different types of styling. I was aware of bootstrap but was not too into how styling works as well as how to insert API data into a database using PHP. I learned how to use different joins when working with my multiple tables and how to work around that when outputting and inputting data into and out of the database.

Saved: 11/24/2025 10:47:48 PM

⇒ Task #2 (0.33 pts.) - What was the easiest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The easiest part of the assignment was the validations as we had done them before. I also found making the queries easy as I am taking a database class, so I have had lots of experience in SQL before.

⇒ Task #3 (0.33 pts.) - What was the hardest part of the assignment?

Progress: 100%

Details:

Briefly answer the question (at least a few decent sentences)

Your Response:

The hardest part of the assignment was making sure the API works and dealing with the output of the API. Sometimes, things like arrays did not work properly when being iterated over as there were so many layers of dictionaries and arrays and text to work through in the API data.
