Instructions

- Overview Link: https://youtu.be/F_jCnIMf4Hw

1. Ensure you've followed the lessons to set up your Github, git, and VS Code
2. Fill in the below tasks (note it'll save as you go)
3. Once everything is filled in, ensure you click "Submit and Export PDF"
4. Upload the PDF to Github in a Module1 folder
5. Find the downloaded PDF and move it into the location of your local repository folder (don't use the Github upload option as we want to practice the git commands)
6. Use `git add .` to track all file changes (i.e., the PDF)
7. Use `git commit -m "Uploading M1 PDF"` to record the change and provide a meaningful message
8. Use `git push origin main` to move the changes to the remote repository's main branch (Note: Future assignments will have a dedicated branch name for their work)
9. Take the same PDF and upload it to the Canvas submission

⇒ Task #5 (2.22 pts.) - Reflection

Progress: 100%

Details:

- Did you have any issues/problems this module? If so, what were they and how did you solve them?
- Did you learn anything new this module? If so, provide some brief details.
- If both answers were no, briefly explain your prior background.

Your Response:

I had some issues when it came to getting the environment variables for PHP set up, but I was able to fix it by checking back at the video online after missing the instruction in class and the change was to add a \php after adding the version number for the folder before it. I did not learn too many new things in this module as I have had lots of experience working with VS Code and Git/Github before, especially Git Bash in my CS100 Honors section. As for setup with things like environment variables, over the summer setting up C++ I ran into lots of errors and problems so I have already spent time with installations through the terminal as well as Windows configurations to get code and languages working properly.
